Swarovski Components
Product Benefits

The Swarovski Components program makes setting stones intuitive. Without the need for any special skills, our Genuine Gemstones and Created Stones can be easily combined with the materials of your choice - from stainless steel, titanium, and leather, to wood and plastic. For cost-effective, beautiful results, simply apply our components to your creative designs for jewelry, watches, eyewear, consumer electronics, and much more.

- Cost & time efficiency
- Easy way to apply stones to materials such as wood, plastic, steel, etc. Easily integrated into existing production processes
- No stone-setting skills required
- New design possibilities for product diversity
- All Swarovski Genuine Gemstones, Created Stones and even diamonds can be set with our components products
- Swarovski quality standards guaranteed: highest precision, minimum tolerances and maximum brilliance
Swarovski Components are a Conscious Choice

Throughout its history, Swarovski has endeavored to remain true to its founder Daniel Swarovski’s vision of a responsible company that not only has its employees’ wellbeing at heart but also that of the environment and society as a whole. This vision drives the company’s dedication to conscious luxury: producing beautiful products using responsible methods that drive positive change.

Swarovski Components are crafted according to industry-leading environmental, safety and labor standards. Our own best-in-class production centers are certified by the Responsible Jewelry Council. They offer a safe, fair and comfortable working environment and innovative manufacturing processes ensure the efficient consumption of natural resources.

Strict standards on product safety, which are based on the REACH regulation programme of the European Union, guarantee that Swarovski Components are free from harmful substances. Our customers deserve only the highest quality, especially in the production of our made-to-order components using gold and genuine diamonds, which are created on request.

As a certified RJC member we can assure that the diamonds and gold are obtained solely from trusted suppliers and reflect our commitment to responsible business procedures. Our strict Diamond Sourcing Policy complies with the rules and regulations set out by both the Kimberly Process and the World Diamond System of Warranties.

Up- and downstream of the value chain we aim to inspire our suppliers and customers to find solutions for the most compelling sustainability issues together.

By choosing Swarovski Components you trust in a product that respects people and the planet.
Swarovski Components

Swarovski Components are available with round Swarovski Genuine Gemstones and Created Stones.
**Presetting**

Specially developed for the quick and efficient setting of Genuine Gemstones and Created Stones, the Swarovski Presetting program enables manufacturers to work in an easy way with a wide range of complex and particularly difficult materials to set stones into. Swarovski Presettings can be used to set stones of various sizes and colors in solid or thin-walled materials. Stones are available mounted in bezel or prong-settings in 18 KT Yellow and White Gold, Silver, Brass, and Bronze.

- **Bezel Thin-Walled**
  - The Bezel Thin-Walled is an innovative solution for the application of pre-set stones, without the need for soldering or adhesives. When working with material strengths as low as 0.65 mm, the Bezel Thin-Walled can be clicked into place with ease.

- **Bezel Solid Open**
  - The Bezel Solid enables simple application by pressing the Presetting into a precision-drilled two-stage hole. The safety rim on the side of the mounting affixes the stone securely, without the need for soldering or adhesives.

- **Prong**
  - The mountings on the Prong are designed for applications with solid materials. Four prongs are first used to set the stone firmly in the tube. The Prong can then be applied by pressing the tube into the solid material. There is no need for soldering or adhesives.

- **Plastic**
  - Our Plastic Presetting is designed to be easily set into milled or injection-moulded holes. It is versatile and can be applied to a vast range of materials such as plastic, cellulose acetate, ceramic, and stainless steel. Without the need for adhesives, the Presettings simply click into place, where it is held securely and permanently through friction. Made from Polyamide 11, the Plastic Presetting is completely resistant to corrosion.

**Jewelchain**

The Swarovski Jewelchain is an innovative, gem-set component, specifically developed to help designers and manufacturers save time and money. Cut to the size of your choice, our Jewelchain can be applied to rings, earrings, bracelets and necklaces, as well as non-jewelry products and accessories.

- **Bezel Hollow Open**
  - The open version has an open backside, with the gemstone’s position extending through the bottom of the tube. The mounting is very short, lightweight, and ideal for extremely thin-walled materials.

- **Bezel Hollow Closed**
  - The closed version has a closed backside that protects the stone entirely. The polished inner side of the tube optimizes the light return and provides maximum brilliance. The lightweight mounting is perfect for thin-walled materials where the backside of the gemstone is difficult to clean.

- **Gemotion**
  - Simple and ingenious, Swarovski Gemotion is an outstanding product for setting stones in flexible materials such as leather, or for applying them to movable rails. Thanks to its rivet-like function, designers and manufacturers can create jewelry, eyewear and individual accessories with ease. Gemotion consists of two parts: a mounting, set with a 2.00 mm, 3.00 mm or 4.00 mm genuine gemstone or created stone, and a counterpart, or closure. Both parts are connected easily, and permanently, by simply snapping them together.

- **Gemdoppio**
  - Setting gemstones was never quicker or easier. GemDoppio, our outstanding product for both manufacturers and designers, is a two-sided element that connects with a simple snap. It can either be used rivet-like in materials such as leather, or set within a rail to be movable. As the two sides can be set with different colored stones, the design possibilities of GemDoppio are virtually limitless for reversible jewelry pieces and other accessories.

**CUSTOMIZATION POSSIBILITIES**

We are able to produce precise components based on customers’ technical requirements. Certain parameters such as tube size, shaft length, tube and stone height, design and material of the component can be customized under certain conditions. Based on the needed modification, a certain minimum order quantity, lead time and price will be defined. If you need further information, please contact your sales or customer service representative.

We take great care and pride in the handling and packaging of our exclusive products. The individual construction of our packaging allows for stacking, while the unique see-through design enables quick and easy identification of the contents. As a guarantee of quality and security, a special seal ensures that your Swarovski product is both original and intact.

**SAFETY TAB**

Our strict manufacturing standards call for dependable security solutions. In order to protect our packages from tampering, we have developed the Safety Tab – an important new security feature, which is applied at the final stage of packaging. Once broken, the Safety Tabs cannot be reused, giving the customer a clear indication that the package has been tampered with. Should any of our packages be delivered damaged or with broken Safety Tabs, we kindly ask our customers to report the incident to their local sales office as soon as possible. The superior quality of our genuine Swarovski products can only be guaranteed when the Safety Tabs are fully intact. In order to open the packaging, please move the Safety Tabs in the direction of the arrow.

**BAR CODING**

To guarantee the quality of our products, and to help trace the history of an order, each of our packages is tagged with a unique bar code label.

**TRUSTSEAL**

Our specially created Trustseal secures each product package and verifies the authenticity of our Swarovski Genuine Gemstones and Created Stones. The complex design of the seal is similar to a hologram, making it virtually impossible to imitate.
